1. **Download a wallet program** from the official website that is appropriate to

your computer.

🤣 Welcome	?	×
Welcome to VIPSTARCOIN CORE.		
As this is the first time the program is launched, you can choose where VIPSTARCOIN CORE will store its data.		
VIPSTARCOIN CORE will download and store a copy of the VIPSTARCOIN block chain. At least 2GB of data will be store directory, and it will grow over time. The wallet will also be stored in this directory.	ed in this	
O Use the default data directory		
○ Use a custom data directory:		
C:\Users\user1\AppData\Roaming\VIPSTARCOIN		
2 GB of free space available.		
A new data directory will be created.		
ОК	Canc	el

- 2. Unarchive the compressed file and run 'VIPSTARCOIN-qt.exe' in the folder.
- 3. You will see a screen shown above.

Note: you can choose the install folder here, but **we recommend not to change from the default folder** for avoiding taking extra steps to install the program.

4. When you specified the install folder, **press the OK button**.

5. If Windows Firewall security alert dialog popped up, press 'Allow access'

button so that you can connect to the VIPSTAR blockchain.

6. After completing the installation, the program automatically runs, and you will see the screen above. You need to wait for the program to finish synchronizing the up-to-date blockchain information through the network. If the progress bar at the bottom of the screen does not change or reach the completion, confirm whether a firewall program does not prevent the

program to connect VIPS blockchain network. When the synchronization finished, the warning message automatically disappear.

- 7. At the right bottom of the screen, you will find several icons.
 - a. See represents the status of the connection with VIPSTARCOIN network. If all the four nodes that extend from the center point are white-colored, your computer is not connected to VIPSTARCOIN network. Check the internet connection and firewall settings. When you click this icon, the program will be disconnected from the blockchain network.

1. Open 'pow_mining.bat' with a text editor.

2. Replace the characters after 9s with your wallet address.

3. If you see the message shown above when you try to run the .bat program, you need to change the security settings of your computer.
